

## EMV Product Update

As we all know, October is the beginning of the U.S. shift to the new payment standards supporting EMV. In an effort to provide resources for yourself and for your customers, we have created the following educational materials:

- > Website: [General Merchant Information](#)
- > Video: [What EMV Means](#)
- > Sales Sheet: [What is EMV and how it works](#)

To simplify the available product information we have split the content into what is available for existing merchants and what is available for new merchants.

The information below provides a general overview of what is coming and when, but details for these products is also critical to provide. In order to provide consistent product updates – including timing and capabilities – we have built an EVO product catalog website called EVO Marketplace. The process of getting our EMV products published into the Marketplace has been completed and is **live as of 10/9/2015** and can be found at <https://marketplace.evopayments.us/product-category/terminals/>

We thank you for your patience as we continue to work together to bring EMV-enabled solutions to market.

Thanks,

U.S. Product Organization

## EMV Solutions for Existing Merchants

Front-End Back-End	Terminal	Features/Requirements	Target Available Date	Date Available
